

TRICKY CIRCUITS

ROUND 1:

- The participants are tested with their basic knowledge in circuit designing where the participants will be given a scrambled circuit and they have to fix the circuit and produce the required output.
- The one who does this task correctly in minimal amount of time will be the winner of this round.

TRICKY CIRCUITS

ROUND 2:

- The participants have to implement a circuit given to them on a breadboard and then solder it.
- To acquire the electronic components for designing the circuit, the participants have to solve multiple riddles based on the electronic components.
